SUMMARY

Frontend Developer with **4+ years** of production experience building e-commerce, CMS dashboards, and SaaS products. I develop **scalable** and **modular** frontend systems with **Vue.js (2/3)**, **React**, and **Next.js (SSR)**. I have strong hands-on experience in **component lifecycle management**, performance optimization, state management (**Vuex**, **Redux Toolkit**), **GraphQL (Apollo Client)** / **REST API** integrations, and **TypeScript**. I maintain sustainable code standards with **ESLint/Prettier**, support safe and predictable changes through **Jest unit testing**, and actively work with **Docker**, Git workflows, and **CI/CD** processes while following PR merge, code review, and team development discipline.

TECHNICAL SKILLS

FRONTEND STACK	Vue.js (2/3), React.js, JavaScript (ES6+)
SSR & FRAMEWORKS	Next.js, Nuxt.js
ROUTING	Vue Router, React Router
STATE & DATA	Vuex, Redux (Redux Toolkit), Pinia, Zustand, TanStack Query, Context API, Component Lifecycle Management
DATA LAYER	GraphQL (Apollo Client), RESTful APIs, Axios, Firebase
MONOREPO MANAGEMENT	Git Submodules
BUILD & BUNDLING	Webpack, Vite
TASK AUTOMATION	Gulp
STYLING	SCSS / SASS, Material-UI, Ant Design, shadcn/ui, Tailwind CSS, Bootstrap, BEM, Atomic Design
UI COMPONENT DEVELOPMENT	Storybook, Storyblok CMS
BACKEND & RUNTIME	PHP, Laravel, Node.js (basic), OOP, MVC, Event-Driven Architecture, Microservices
REAL-TIME COMMUNICATION	GraphQL Pub/Sub, Socket.io, SSE (Server-Sent Events), Firebase
CODE QUALITY	ESLint, Prettier
TYPE SAFETY	TypeScript
TESTING & QUALITY	Jest (Unit Testing)
CONTAINERIZATION	Docker (basic)
CI/CD	GitHub Workflows, Jenkins (familiar)
TOOLING	Jira, Agile/Scrum, Swagger, Cursor, Claude Code, Codex
LANGUAGES	Turkish (Native), English (Technical - Professional Working Proficiency)

WORK EXPERIENCE

Frontend Developer — Machinarium (Remote, AT)

Sep 2025 – Nov 2025

- Built admin panel features and reusable UI components for multiple e-commerce clients (Gencallar, Nadir Gold, A101) using **Next.js App Router**; contributed to maintaining a consistent design language across different products.
- Worked on the existing **Context API** global state structure and **Axios** service layer to improve maintainability and API integration consistency.
- Used **ESLint** and **Prettier** in line with team standards in a shared frontend codebase; contributed to the evolution of internal **Cursor Rules** and actively participated in **code review** processes.

Full Stack Developer (Frontend Focused) — Energetisch.fit (Remote, AT)

Oct 2024 – Jul 2025

- Stabilized critical frontend flows in a high-usage Laravel + Livewire therapy booking platform by resolving UI/data integrity issues across cart, PDF generation, email workflows, and progress calculations; improved release reliability through stronger validation and exception handling.
- Modernized a legacy, hardcoded Laravel frontend that relied on frequent full-page re-renders by refactoring flows into reusable **Livewire/Blade** components with component-scoped state, partial updates, and debounce controls, improving both maintainability and interaction performance.

Full Stack Developer (Frontend Focused) & Startup Venture — Payzec (Remote, TR)

Aug 2023 – Jul 2025

- Played an active role in designing and maintaining a **modular monorepo architecture** (Git submodules) that aligned multiple backend services with a scalable **Vue.js (v3)**-driven frontend layer.
- Led the development of a scalable **one-click checkout** flow using **Vue.js (Composition API) + Vue Router**, structuring route-based navigation, reusable composables, and async 3DS payment handling.
- Built a reusable and composable UI structure with clear separation of concerns, supporting sustainable shared component patterns.
- Managed complex application state with **Pinia** across cart, order, and payment lifecycles, ensuring predictable async behavior in checkout flows.
- Standardized API communication through a reusable **Axios-based useApi composable**, implementing centralized auth, CSRF handling, interceptors, and unified error management.
- Implemented reactive cart synchronization patterns to support real-time UI updates while keeping frontend logic loosely coupled from backend events.

Frontend Developer — Alışgidiş (Istanbul, TR)

Mar 2024 – Jul 2024

- Collaborated in a cross-functional team to develop a modular e-commerce frontend using **Next.js (App Router, SSR)**, working on scalable product discovery, cart, checkout, and order lifecycle flows.
 - Worked closely with senior engineers to implement performance optimizations using **Server Components**, structured caching and revalidation strategies, and selective code splitting to reduce client-side JavaScript.
 - Contributed to a scalable state management architecture using **Zustand** and **TanStack Query / SWR**, supporting predictable async flows and **optimistic UI** behavior.
 - Contributed to building and maintaining a reusable component system following **Atomic Design** principles to ensure consistency and long-term maintainability.
 - Worked with backend teams on API contract alignment and supported moving data-heavy operations server-side to improve rendering performance.
 - Actively contributed to code reviews, technical discussions, and iterative improvements to maintain clean and sustainable frontend standards.
-

Full Stack Developer — Patara Soft (Remote, TR)

Nov 2023 – Feb 2024

- Developed a modular admin panel frontend with **Blade / jQuery**, including dynamic tables, client-side filtering, and AJAX-driven CRUD operations.
 - Implemented **i18n multi-language support** and improved SEO using **semantic HTML** and **dynamic meta tags**.
-

Full Stack Developer — Kodlooper Yazılım (Sakarya, TR)

Aug 2022 – Feb 2023

- Developed frontend applications using **Vue.js (2/3 - Options API)**, **Nuxt.js**, and **React.js** across SSR and SPA architectures.
 - Implemented structured state management with **Redux Toolkit (createSlice, extraReducers, async request lifecycle)** and **Vuex** for predictable UI state transitions.
 - Worked with **GraphQL (Apollo Client)** while developing an İkas theme, implementing **queries / mutations / subscriptions (Pub/Sub)** and leveraging client-side caching patterns.
 - Applied **optimistic UI** patterns during mutation flows to keep interactions responsive while preserving async consistency.
 - Improved SEO and SSR behavior in **Nuxt.js** for product listing pages using **asyncData/fetch** patterns.
 - Explored containerized local development with **Docker** to run multiple PHP versions consistently on Windows.
-

EDUCATION

Associate's Degree — Computer Programming

Anadolu University | 2022 – 2024

Bachelor's Degree — Civil Engineering

Eskişehir Osmangazi University | 2017 – 2021

CERTIFICATES

- FMSS Bilişim Front-end Practicum — Patika.dev | Jun 2023 [verify](#) ↗
- Advanced React — Meta | Apr 2023 [verify](#) ↗
- Responsive Web Design — freeCodeCamp | May 2022 [verify](#) ↗
- Beginner Level Frontend Web Development Path — Patika.dev | Apr 2022 [verify](#) ↗
